

DKNWSERVER

Wi-Fi Adapter

With the ability to manually and automatically control your apartment air conditioning system, you will return home to a climate that you desire.

Take control of your Daikin Air Condition system from wherever* you are using the Daikin Wi-Fi adapter and free downloadable App on your smart phone or tablet.

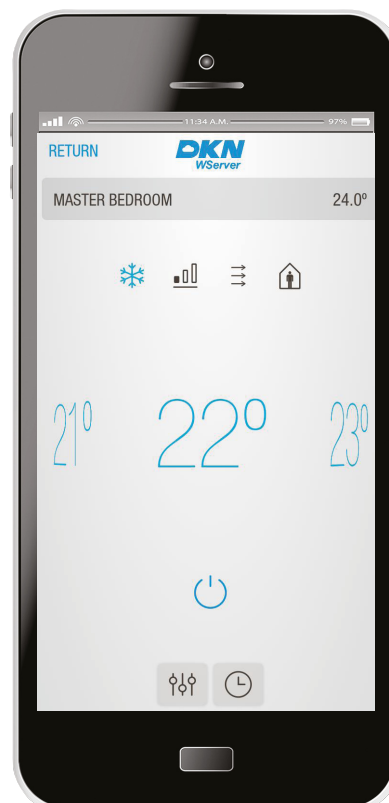

Benefits:

Manually and automatically control your room or apartment environment using your smart phone.

From switching between heat and cooling, setting the required temperature and fan speed, setting minimum comfort levels and time clocking your air conditioning, your apartment climate will be maintained to meet your requirements.

- > Multiple users? - Each user can be given their own account and allocated unit(s). Users can even share access to the same unit(s).
- > Phone not available? - Control is also available via a dedicated web site using a web browser on your tablet or PC.

*Broadband internet connection, Wi-Fi connection or Mobile data connection required.

Wi-Fi Adapter

DKNWSEVER

Installation:

Communications and power are supplied via 2 integral 1.5 metre cables. This, combined with the adapters small size (95x33x54mm) means the adapter can be located out of sight, whilst still maintaining a Wi-Fi connection.

A connected hard wired remote controller is mandatory as a back-up form of control

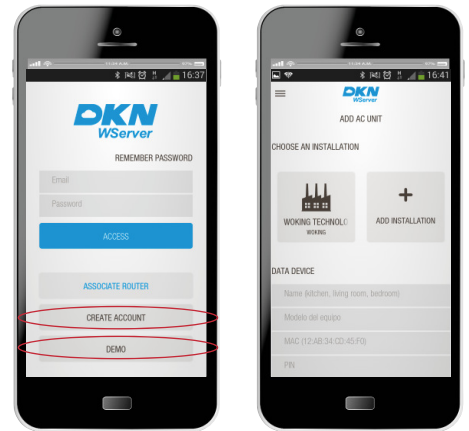

Commissioning:

Linking of the adapter to a Wi-Fi router can be achieved via WPS or manually. Step by step guidance is supplied via the App. User account creation is via the App.

Creation of the 'installation' and adding of units is via the App. All this means that the commissioning can be carried out prior to the owner taking up residence, by a competent person.

Full written commission and user instructions are also available.

Features:

Basic Operations

- > On/Off
- > Operation mode
- > Set point & room temperature
- > Fan speed
- > Air flow direction
- > Time clocking

A delay off timer to automatically stop your air conditioning after X hours run can set, as well as multiple time clock schedules. Both of these features can reduce energy wastage.

Occupied (Setback) and unoccupied (Home Leave) can be separately enabled to ensure minimum comfort levels are maintained at all times.

In the event of an operational issue, the error & associated code will be displayed, to aid in the reinstatement of your system. Individual control of each room as well as control of the apartment as a whole is available via the group control function.

An unlimited number of rooms and multiple apartments can be controlled by a single account.

Indication of the ambient temperature and a weather forecast for the locale surrounding your apartment allow the user to adjust the system settings to meet their requirements.
